

Impact Risk	Risk Statement	Response strategy	Objective	Likelihood	Impact	Risk Level
Computer Failure	The computer fails and shuts down causing loss of unsaved changes	Save regularly.	Reduce the amount of data lost	Low	Low	Low
Being Sick	You are sick and therefore will need to take a day off	Plan for this. Do extra work everyday so that you finish one day early, if you do get sick you will finish the project just in time.	Finishing the project in time	Low	Medium	Low
HDD or SSD failure	You lose all data stored on you computer.	Upload regularly to the cloud or github so that you data is saved somewhere other than your computer.	No loss of data	Low	High	High
IDE stops working	IDE being used has an error and does not work anymore.	Either reinstall the IDE or have another IDE installed which you are comfortable with.	Reduce time wasted.	Low	Low	Low

Computer stops working	The computer does not work anymore, and a new one is needed.	Regularly upload all the data to the cloud and make sure you have another computer that can be used as a replacement, or go complete the project in the local library's computer	Allow you to work on project	Low	High	High
Physical pain	Physical pain due to overworking, e.g. eye stain, wrist pain, back pain...	Take regular breaks where you walk around and stretch your body.	Reduce physical pain	Medium	Low	Low
